

The Next Generation of Global Managed IT Services has arrived

Global Management One is a leading portfolio of next-generation managed services from NTT Communications, delivering smart, reliable and secure IT solutions that make an impact on the bottom line, energize businesses and propel innovation.

Today's business world is shrinking. Businesses are connected 24/7 talking to customers, suppliers, and partners round the globe. They need to be agile and fast to take advantage of new business opportunities, no matter where or when they are happening. This digital mindset demands a secure, reliable and robust infrastructure that inspires trust.

With increasingly diverse and complicated infrastructures and workflows, enterprises are looking to Managed Service Providers to take the strain out of day-to-day IT management, to enable internal IT teams to better focus on adding business value such as digital transformation and innovation.

GMO is a global solution for:

- **Application management**
- **Infrastructure management**
- **Managed public and private Cloud services**

From appliances to applications, GMO can help you manage all the layers of your IT real estate. Pay for what you use when you use it. It really is that simple.

GMO solutions provide your business with an enviable flexible and agile infrastructure. At the same time, you are secure in the knowledge that you are being supported by a network of over 4,700 of the best IT engineers and equipped with the tools 24/7.

GMO – your answer to the changing world of enterprise IT

Today's business is digital. IT is no longer labeled as a cost center or a support function. IT is now a strategic business enabler – critical to sustainability, growth, new business models and insightful decision making.

This shift in thinking requires tools and solutions that will connect and engage partners, customers, and employees. Our GMO solutions portfolio provides a full range of solutions and services that are aligned with your specific business needs.

Our hybrid delivery model combines on-shore, near-shore and off-shore operations to offer you a solution that is both cost-effective and high quality.

Forget hard to manage multiple Service Level Agreement (SLA) contracts. Here at NTT Com, we like to make life as easy as possible. We roll all these contracts into one, single transparent SLA contract and give you a 360-degree view of your IT real estate through a single customer portal.

More than a service provider – we're a trusted advisor

Our approach is based on industry experience. Which is why businesses worldwide rely on us to help them with IT strategies, governance, and compliance.

We have exceptional people working for us who drive best practice processes and develop industry-leading tools designed to support our clients in every step of their digital transformation journeys.

Security is paramount to our services

The more connected business gets, the greater the attack vista. The importance of data integrity can't be overstated. Every day we manage critical applications and business processes on behalf of our clients. Ensuring the confidentiality, integrity, and availability of this data in a secure environment is imperative.

With GMO we reduce the security risk and give clients visibility and control across the entire solution. We have ISO27001 and ISO20000 accreditations and are PCI-DSS compliant for financial solutions, and use password encryption so you can rest assured your data is fully protected at all times.

We ensure workloads are managed and run in the right place. We handle critical applications with ITIL certified robust processes. That is why 80 of the world's Fortune 100 companies put their trust in services from NTT Com.

Why choose managed services from GMAOne?

NTT Com is quite simply not like any other Managed Service Provider (MSP) out in the marketplace. We work closely with the world's biggest IT vendors. We know their solutions inside out and know exactly what is coming down the pipe. Enterprises look to us to help them visualize their future IT roadmap and meet their digital goals.

We provide a full end-to-end global service offering that is truly scalable. It combines a cloud infrastructure and a comprehensive GMAOne solutions portfolio together with a network of 140 highly secure data centers linked to our own global SD-WAN enabled high-speed network. This means we can deliver to wherever our customers are located.

If your organization relies on IT to make a positive difference to your bottom line profits and/or to the customers you serve, then your strategic partner of choice should be NTT Communications.
